

Walkway market hall Rotterdam

Client: City of Rotterdam
 Contractor: Construction company Mourik B.V.
 Architect: Herschbach-Architecten
 Steel construction: Construction company Mourik B.V.
 Application coating system: Viets Staalconstructie
 Date of construction: February 2016

The square in front of the Rotterdam Market Hall has been transformed in 2015, commissioned by the City of Rotterdam. A walkway has been constructed to cross over the deepened bicycle shed, which connects the Blaak with the market. A telescopic crane with a lifting capacity of 400 tons was needed to get the 30-tonne bridge in place. The bridge was finished with natural stone pavement afterwards.

The steel construction is protected for an extreme long time by SteelKote coating. Mourik B.V. aims for sustainable production and looks for ways to do so in all the links of the chain. The low environmental impact of SteelKote coatings makes the product a perfect match for this contractor.

C5 SteelKote C-5M Supreme Extreme 25 years		
Layer 1	803 SteelKote EP AC+	80µm
Layer 2	806 SteelKote EP Miox	100µm
Layer 3	808 SteelKote PC HS UV+	80µm
Total		260µm

extreme corrosion resistant

40% less film thickness

permanently flexible
